

MAXILLOFACIAL SURGERY  
AND ORAL IMPLANTOLOGY

CENTRO MEDICO TEKNON  
BARCELONA

## Integrated facial and oral care

The Maxillofacial Surgery and Oral Implantology Department at Centro Médico Teknon (hospital) provides a multi-disciplinary team of internationally renowned specialists, who, backed by the state-of-the-art technology and hospital support services, offer integrated solutions for facial and oral alterations.

The maxillofacial surgeons, oral implantologists and specialists offer integrated treatment in all the specialized treatment areas, the most outstanding of which include:

## Tumour Surgery

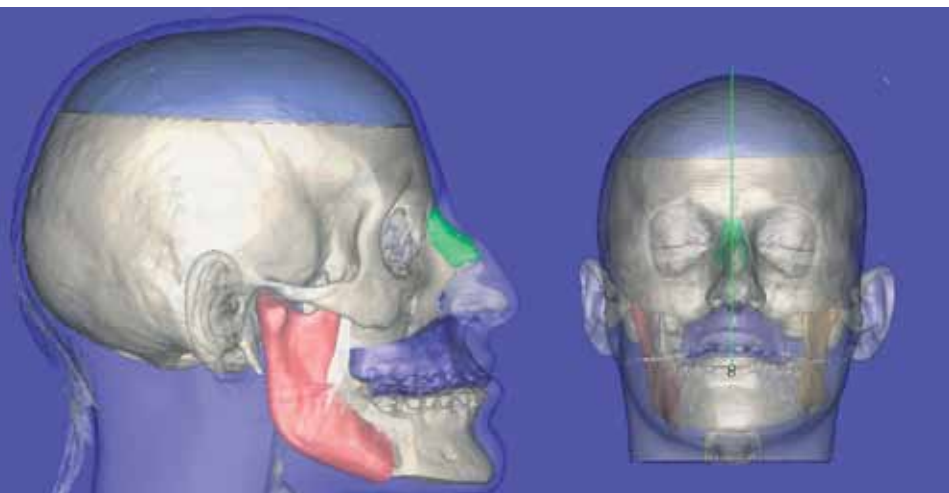

The multidisciplinary team works with specialists in oncology and radio oncology at the Instituto Oncológico Teknon (Oncology Institute) to plan and provide personalised treatment for any type of benign or malignant tumours found in the face and neck.

## Implants

With full oral restoration in a single session, teeth and tissues can be restored in an atmosphere that seeks patient security.

## Orthognathic Surgery

With the development of innovative, minimally invasive techniques, surgical treatment can be provided for the treatment of aesthetical and functional deformities of the facial skeleton.

## Full oral remodelling in a day

Today, oral treatment is possible in a single session by eliminating problem teeth and replacing them with implants and crowns. It is all possible thanks to case planning with three-dimensional scanners and the use of surgical implants, minimally invasive and pain free implantology with maximum patient safety.

Patients are admitted to hospital in the morning; the procedure is performed with sedation or general anaesthesia. Existing teeth are treated conservatively, while missing teeth are replaced with titanium implants into the bone. Then, the teeth are fixed on the implants so that the patient can be released the same day, without remaining in hospital overnight.

The Teknon Maxillofacial Surgery and Oral Implantology Department is an international pioneer in the development and application of techniques that allow the restitution of bone loss in those cases where the placement of implants is difficult due to the lack of bone.

## Teknon, excellence in an exclusive environment

Centro Médico Teknon, located in Barcelona, is a leading hospital within the private health care sector in Spain. This medical centre has some of the best medical professionals of Europe which makes the hospital a centre of excellence in all types of medical and surgical disciplines. Teknon has a strict patient-oriented quality management programme, thanks to which, the hospital is accredited by a number of internationally recognised accreditation authorities.

When considering comfort, and anticipating the needs of the many patients throughout Europe, the International Patient Programme has foreseen all the various aspects of patient/family well-being and satisfaction, including door-to-door service, travel plans, airport pick-up and transfer to the clinic or hotel. Depending on patient needs, the clinic can also provide interpreting services and accompany relatives during their stay in the city of Barcelona.
